

ELECTRICAL METALLIC TUBING (EMT)

Electrical Metallic Tubing (EMT)

Allied Tube & Conduit® has been manufacturing Electrical Metallic Tubing (EMT) for over 50 years.

Our superior coatings and patented flow coat process changed the tubing industry forever. Allied Tube & Conduit® provides E-Z Pull® EMT conduit as well as E-Z Pull® EMT in True Color™ and Kwik alternatives. In addition to conduit, Allied also manufactures EMT elbows made out of our EMT conduit with the E-Pull coating. Our E-Z Pull® Conduit made with Allied's superior E-Z Pull® interior coating makes wire pulling easy and provides superior protection for your conductors and cables.

With the standard wall thickness of EMT and the strength of steel, Allied Tube & Conduit's EMT Conduit and elbows create an Electrical Raceway System recognized as an equipment grounding conductor. EMT conduit is a raceway solution which allows for future wiring changes and provides excellent mechanical protection to conductors and cables. EMT provides EMI shielding and is 100% recyclable.

Allied Tube & Conduit's mission is to be the leader in providing solutions and more choices for customers. In our continuing commitment to provide customers with innovative solutions, Allied Tube developed Kwik-Fit® and Kwik Compression EMT; labor savings alternatives with an integral coupling on one end. In addition, Allied Tube & Conduit® developed a line of True Color™ EMT for ease of circuit identification in the field.

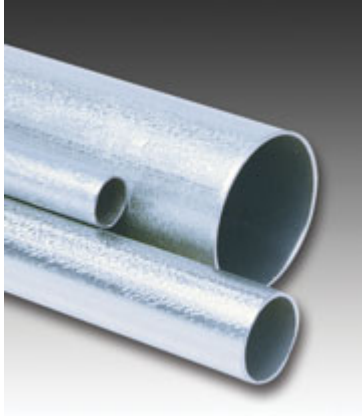

In our commitment to provide superior service and value to customers, Allied's EMT is stocked at distribution centers across the country. Allied's EMT Conduit and EMT elbows are part of the Atkore Electrical Raceway portfolio of products and can be co-loaded with many of our other Allied Tube & Conduit® and Atkore Electrical Raceway Products.

For a complete list of our EMT products please browse our offerings and experience the benefits of Allied Tube & Conduit® E-Z Pull® EMT and EMT Elbows.

True Color™ EMT

True Color EMT's is available in 8 vibrant colors to provide instant identification of multiple circuit systems.

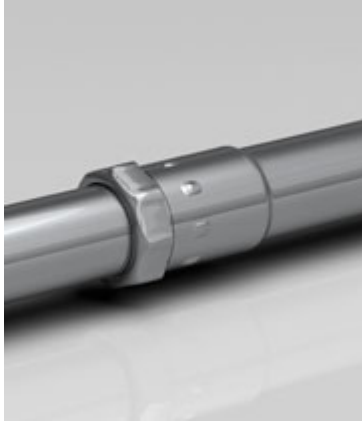

E-Z Pull® EMT

Quality electrical metallic tubing with the E-Z Pull interior coating. Hot galvanized steel using patented inline Flo-Coat process for long lasting exterior protection.

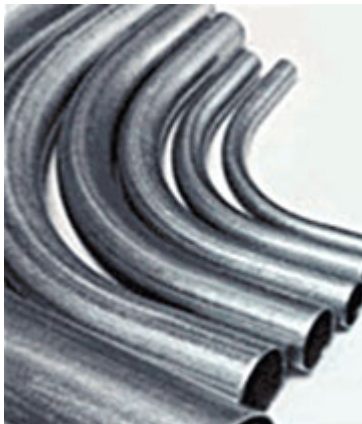

Kwik-Fit® EMT

Kwik-Fit EMT is manufactured from high quality steel with a built-in set-screw coupling, eliminating the need to purchase inventory, and install separate couplings.

Kwik-Fit® Compression EMT

All the benefits of E-Z Pull EMT with an integrated coupling. This significantly reduces installation time, and eliminates the need to purchase inventory, and install separate couplings.

Elbows

90 and 45 degree EMT elbows are made from hot galvanized steel using patented inline Flo-Coat process and E-Z Pull interior coating.
