

HOW CAN I USE EVAPO-RUST® ON AN AREA THAT IS DIFFICULT TO SOAK?

Soak a thick paper towel with Evapo-Rust® and then place it over the rusted area. Make sure the soaked paper towel conforms to the shape of the object being de-rusted. For heavier rust, cover the soaked towel with the plastic wrap and tape the wrap down to prevent moisture from escaping. After an appropriate period of time, remove the soaked towel and rinse the area with water. The paper towel must remain soaked with Evapo-Rust® for this method to work effectively.
