

A collection of components for a propane conversion kit. On the left, a carburetor is shown with a black air filter. Below it are various small parts: a yellow T-fitting, a blue O-ring, a set of screws, and a small instruction manual titled "CONVERSION KIT INSTRUCTION MANUAL". To the right of the carburetor are several other parts, including a brass fitting, a black hose, and a blue and brass fitting. On the far right, a green propane solenoid valve is shown with a black hose and a brass fitting. The background is a light blue and white pattern with the text "Propane and Natural Gas" visible.

Generac-XG8000E Tri-Fuel Kit uses an adapter that makes it possible to operate an engine on three different fuels Propane, Natural Gas, and Gasoline. Adapters will mix the Propane or Natural Gas into the air stream above the gasoline carburetor. The gasoline carburetor remains basically untouched. So this kit is not a conversion, it is an adaptation.
