FortiFone™

IP Telephones

Advanced features and easy operation

FortiFone telephones combine excellent audio quality with optimum usability, providing you with maximum value. You get a range of phones that are built to work hard as well as look professional, with large LCD displays and big, bright lights for appearance keys. The line-up covers the needs of the whole office, from basic user to advanced attendant. Looking for line appearance, advanced programmability and teleworker extensions that work just like local extensions? FortiFone IP phones are the answer. They're loaded with advanced features and configure themselves automatically, meaning you don't need to be an expert to install them. And, because they plug into your existing computer network, you don't need to run phone wiring to each desk.

Programmable appearance/feature keys

Whether you want instant access to FortiFone features or need to see which of your lines or extensions are in use and which are free, these phones fit the bill. Each has big, bright multi-colored LED light keys with customizable functions. So you can have a phone tailored to the exact way you like to work. Plus, once you have configured the phone's keys, you can print the dialpad with one click in the FortiVoice configuration software.

External IP extensions

Plug your FortiFone IP phone in anywhere and it can function just like your extension in the office. It's the perfect solution for teleworkers or employees who split their time between the office and their home office (requires broadband Internet access).

The FortiFone Phone Family: Seamless Integration with FortiVoice Phone Systems

✓ High-quality full-duplex speakerphones

✓ Highly visible programmable illuminated feature/appearance keys

✓ Adjustable display angle

✓ Power over Ethernet (POE)

✓ Easy to set up; auto-discovery on LAN
