

AMPLIFIER TESTING WARNINGS

1. Only use with 802.11x devices. Do not test with a continuous wave (CW) signal or on a Network Analyzer.
2. Insure that the output of the amplifier (antenna port) is connected to an antenna with a low VSWR. This will prevent power from being reflected back to the output stage of the amplifier and possibly damaging the amplifier.
3. Only use the power supply that comes with the amplifier.
4. Make sure that the amplifier is used in a well ventilated area.
