

The HyperLink HG2427G high-performance reflector grid Wi-Fi Antenna provides 26.5 dBi gain for long-range highly directional applications. This includes point to point systems, point to multi-point and wireless bridges in the 2.4 GHz ISM band as well as IEEE 802.11b/g/n. It can be installed for vertical polarization.

This 27dBi grid antenna's construction features a die cast aluminum reflector grid for superior strength. The antenna's 4-piece reflector grid is simple to assemble and significantly reduces shipping costs.

The HG2427G compliments the successful family of grid antennas that include the popular [HG2424G](#) and [HG2430G](#) models, offering customers the option to select the antenna that best fits their network and communication requirements.
